

CLAIM AMNDMENTS

Claims 3, 5, 8, 10, 15, 20, 21, 22, 23, 24, 25, 26 and 27 are pending. Claims 1, 2, 4, 6, 7, 9, 11-14, 16-18, and 28-32 have been canceled. Claims 8, 19, 21 and 25 are amended herein.

1 Claims 1 and 2. (Canceled)

1 3. (Previously Presented) The display apparatus according to claim 21, further comprising
2 at least one tool access hole formed through the rear cover for permitting a tool to be inserted
3 through the rear cover to disengage the coupling and the rib.

1 Claim 4. (Canceled)

2 5. (Previously Presented) The display apparatus according to claim 21, further comprising
3 at least a pair of stops protruding from a rear surface of the bezel to engage the panel support and
4 prevent the panel support from moving across a plane of the panel.

1 6 - 7. (Canceled)

1 8. (Currently Amended) The display apparatus according to claim ~~[[7]]~~ 21, further
2 comprising a plurality of support ribs protruding from the rear cover so as to be contacted with each
3 stop to force the hook of each stop toward the edge of the panel support to support the engagement

4 of the hook and the edge of the panel support.

1 9. (Canceled)

1 10. (Previously Presented) The display apparatus according to claim 21, further comprising
2 a skirt of the bezel having a rabbetted edge and a skirt of the rear cover having a rabbetted edge that
3 overlap when said bezel and said rear cover are coupled together.

1 11. - 14. (Canceled)

2 15. (Previously Presented) The display apparatus according to claim 27, further comprising
3 at least a pair of stops protruding from an inner surface of the bezel to engage the panel, to prevent
4 the panel from moving.

1 16.-18. (Canceled)

1 19. (Currently Amended) The display apparatus according to claim [[17]] 25, wherein the
2 edge of the panel is formed with a projection allowing the hook of each stop to overlap the projection
3 to support the engagement of the hook and the edge of the panel.

1 20. (Previously Presented) The display apparatus according to claim 27, further comprising

a skirt of the rear cover having a rabbetted edge and a skirt of said bezel having a rabbetted edge that overlap when said bezel and said rear cover are coupled together.

21. (Currently Amended) A display apparatus, comprising:

a panel bearing a screen disposed to display varying visual images;

a panel support holding the panel;

a bezel framing a front periphery of the panel;

a rear cover removably mating with said bezel while encasing said panel held by said panel support;

at least one rib formed to project from a peripheral surface of a first one of the bezel and the rear cover; [[and]]

at least one deformable coupling bearing a groove, extending from an inner surface of a different one of the bezel and the rear cover, oriented to embrace a correspond rib during said mating, wherein the rib is inserted in the groove; and

at least four stops disposed to be adjacent to four corner portions of a rear surface of the bezel, and protrude from said rear surface of the bezel to engage the panel support and prevent the panel support from moving across a plane of the panel, wherein a hook is formed at a leading edge of each stop for engaging an edge of the panel support, and the edge of the panel support is formed with a projection allowing the hook of each stop to overlap the projection to support the engagement of the hook and the edge of the panel support.

1 22. (Previously Presented) The display apparatus of claim 21, comprised of:
2 one said rib disposed at each corner portion of the rear cover; and
3 a corresponding said coupling disposed at each corner portion of the bezel.

1 23. (Previously Presented) The display apparatus of claim 21, comprised of:
2 one said coupling disposed at each corner portion of the rear cover; and
3 a corresponding said rib disposed at each corner portion of the bezel.

1 24. (Previously Presented) The display apparatus of claim 21, comprised of:
2 at least one stop extending from an inner surface of said bezel engaging said support while
3 maintaining said bezel surrounding said screen.

1 25. (Currently Amended) A display apparatus, comprising:
2 a panel bearing a screen disposed to display varying visual images;
3 a bezel framing a front periphery of the panel;
4 a rear cover removably mating with said bezel while encasing said panel;
5 at least one rib formed to project from a peripheral surface of a first one of the bezel and the
6 rear cover; [[and]]
7 at least one deformable coupling bearing a groove, extending from an inner surface of a
8 different one of the bezel and the rear cover, oriented to embrace a corresponding rib during said
9 mating, wherein the rib is inserted in the groove, with one said coupling disposed at each corner

10 portion of the first one of the bezel and rear cover; and a corresponding said rib disposed at each
11 corner portion of the different one of the bezel and the rear cover;

12 at least four stops disposed to be adjacent to four corner portions of a rear surface of the
13 bezel, and protrude from said inner surface of the bezel to engage the panel and prevent the panel
14 from moving, wherein a hook is formed at a leading edge of each stop for engaging an edge of the
15 panel, and

16 a plurality of support ribs protruding from the rear cover so as to contact each stop to force
17 the hook of each stop toward the edge of the panel to support the engagement of the hook and the
18 edge of the panel.

1 26. (Previously Presented) The display apparatus of claim 25, comprised of:
2 one said rib disposed at each corner portion of the rear cover; and
3 a corresponding said coupling disposed at each corner portion of the bezel.

1 27. (Previously Presented) The display apparatus of claim 25, comprised of:
2 one said coupling disposed at each corner portion of the rear cover; and
3 a corresponding said rib disposed at each corner portion of the bezel.

1 28-32. (Canceled)
